Certificate Of Appreciation

This certificate is presented to

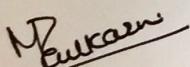

Mr./Ms. Parth Doshi

for volunteering in ARDUINO DAY 2017

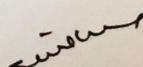

organized by ISTE SAKEC (MH-122) in association with

DEPARTMENT OF ELECTRONICS ENGINEERING

held on 1st April , 2017.

Prof. Manjusha Kulkarni
Co-ordinator

Prof. Shikha Srivastava
Secretary, ISTE SAKEC

Ref. No. SISC 180717

Are we alone, or we aren't. Both the possibilities are equally terrifying !

The title can be taken into two contexts. One is the philosophical idea that we entered this world alone and will leave alone and there will be different types of people crossing our path in this journey of life so are we actually alone or not. And the other is that is life only dwelling on our beloved planet Earth in the entire Cosmos? Quoting Arthur C. Clarke - "Two possibilities exist: either we are alone in the Universe or we are not. Both are equally terrifying".

Talking about the philosophical context, whenever we are sad about any person treating us badly or we fret about someone leaving us alone, we are told that we should not be attached emotionally to anyone or anything because we came into this world alone and will be leaving alone too. If we consider a very huge timescale of a lifetime as a unit, then each of us individuals are all alone. But we come across a lot of people everyday and a lot of them go beyond that threshold of just passing by and decide to stay. They all become a little aspect of our life. Maybe not a very integral but definitely they do matter.

There will always be people who will be jealous of your capabilities and achievements and will try to pull you back or hinder you to move ahead by throwing as many obstacles as they can. People like this can make you feel like not having anyone in your life and trusting any person after experiencing such people becomes very difficult. It can be simple to say and difficult to do but is definitely the best path to choose.

Moving on to the latter context, is life only dwelling on our planet and no other ? The Universe came into existence billions of years ago and our humble little planet did so, millions of years ago. Seeing the timescale of Human Existence (in comparison to), all this will require some visual aid to even see. But man had the vision to see beyond the boundaries and the thinking to question and understand beyond the limits. The Theory of Evolution backed by discoveries across the globe explained the story of our existence and the Big Bang Theory tells the story of existence of our Universe. We should consider ourselves very fortunate that a lot of things fell into place for us over the span of these billions of years. Water in liquid form should be at the top while listing factors that affect life. The temperature of our planet is conducive for the

existence of life. Its distance from its Star is appropriate. Existence of the ozone layer and the Atmosphere is a boon to us otherwise we were on the verge of being ash. Gravity, blend of all gases in air, even the size of our planet, our moon, position of our Sun and its solar system in the Milky Way Galaxy and stability of Earth and Sun have played their roles well. What were the odds of all this happening you may ask, very very less I would say. And in this Cosmos will millions of Galaxies, each of them having millions of Stars and each of them having their own Solar Systems, our sample set is very huge while calculating the probability of life in this cosmos. We have also come across planets where a lot of these factors worked out a bit differently but they did ? Still there is no sign of it happening anywhere else.

Assume there is life on some planet in some far away galaxy in the farthest corner of our universe which can be discovered anytime soon. Do they have any plans of meeting us? Are they even aware of our Existence ? Do they know what are our capabilities and limitations ? Are they people good at heart and will be wanting to help us or are they evil and will be wanting to destroy us ? Do they even have hearts ? No one can answer these questions with confidence. Maybe I should say no Earthling can. But we can make some analogies with our knowledge. As mentioned earlier, the chances of existence of life anywhere else is very very less. Further, comparing all the living beings on our planet, the possibility of that hypothetical life dwelling beyond our knowledge being an intelligent life is negligible let alone them being more intelligent and further developed than us. So we need not worry about anyone attacking us any soon.

What if there is no life anywhere else at all ? What if we get into such trouble that we need help from beyond our limits ? Are we left all by ourselves till the end ? We will be absolutely alone in this vast vast Universe which whose boundaries are infinity to us. Being Unity in this Infinity, pun intended, is terrifying! Last person on this planet, which one will inevitably be, will be last person, the last person in the entire Universe.

Thus, the possibilities of being alone and not being alone are both equally terrifying.

Spoken Tutorial

Certificate for Completion of Java Training

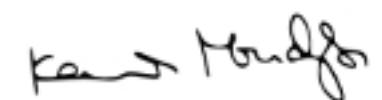

Talk To A Teacher

This is to certify that **PARTH DOSHI** has successfully completed **Java** test organized at **Shah and Anchor Kutchhi Engineering College** by **Sonali Bhutad** with course material provided by the Talk To A Teacher project at IIT Bombay.

Passing an online exam, conducted remotely from IIT Bombay, is a pre-requisite for completing this training. **SHRADHHA SARODE** at **Shah and Anchor Kutchhi Engineering College** invigilated this examination. This training is offered by the **Spoken Tutorial Project, IIT Bombay, funded by National Mission on Education through ICT, MHRD, Govt., of India.**

Dear Parth Doshi,

Sub: Appreciation letter for contributing content in the NEXUS magazine

We at ISTE SAKEC, really appreciate your contribution towards our magazine Nexus and would like to take this opportunity to thank you for the work you have put in over the time on the articles that you have submitted on 'Are we alone' and 'The Human Eye' along with a photograph. You have put together a thorough and well-researched presentation, and we are looking forward to sharing it with everyone.

We are also gratified that you chose NEXUS to showcase your work and in the process, have helped us to augment as well. We plan to further promote such talents showing admirable technical, non-technical and literary skills.

Thank you once again.

Shikha

Nucleus

The Human Eyes

Eyes are most beautiful creation of God.

They are sparkly and shiny,
and always damp and sometimes wet.

They are one's gateway to life,
they are gateway to one's soul.

They look at some things with passion,
some things with compassion,
some things with lust,
some things with disgust.

But eyes are cruel !

They distract us, they deceive us, they mislead us.

Through them we see naked truth of world,
through them we tell our story to world.

We interpret, we misinterpret,
We make ourselves terrible.

But however they are, they are a gift.

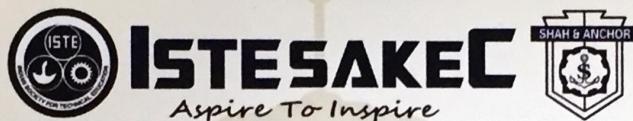

Till we live, we have to appreciate it.
